

WALLSTOXX

IT'S THIS QUICK: HOW WALLSTOXX HITS YOUR WALL.

Hurray! It's here! Congratulations on receiving your customized WALLSTOXX. Now it just needs to hit the wall—so let's do it together. Just make sure that your wall is white, clean and free of any wallpaper. Let's go!

Begin by unpacking the box. This is what you'll find in your Easy Kit:

1x
paste

1x
paste
brush

3x
mounting
brackets

1x
scalpel

1x
mounting
angle

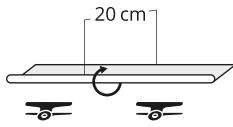

Get ready: We recommend that you cover the floor in front of the wall with a covering foil to protect it from paste splashes (even though you can easily wipe them away). Please remove any power outlet or light switch covers—and make sure to turn off the power.

1

Mix the paste:

Start out by thoroughly stirring all the paste in a bucket together with 4 liters of water for around 3 minutes. Then let the paste (and yourself!) rest for around 10 minutes before giving the paste another thorough 2-minute stir.

2

Roll up the motif widthwise:

First fully spread out your motif on the floor (printed side up) and then roll it up along its width from the bottom toward the top until there are around 20 cm left at the top. Affix the rolled-up part to the wall with the mounting brackets.

3

Apply the paste to the wall:

This is pretty self-explanatory, but for the sake of being complete: Using the brush, simply apply the paste to the complete surface of the wall where the WALLSTOXX will be hung. Spread it generously without leaving any gaps.

4

Mount your WALLSTOXX:

Align the motif in the desired position along the top part that's not rolled up, press it on and smooth it out from the center sideways. This may require some assistance. At around every two meters, you'll need someone to hold it for you (in other words, if your motif is 4 meters wide, you'll need one other person to help you).

5

Smooth out your WALLSTOXX:

Take off the brackets and hold the motif slightly away from the wall. Then begin to smooth it against the wall from the center sideways and downwards.

6

Paste your WALLSTOXX again:

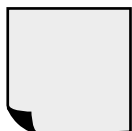

There it hangs! Now you need to apply another round of paste to your personal WALLSTOXX. This time apply the paste sparingly, remembering that any excess paste can be wiped away with a clean cloth.

7

Cut off any excess material:

Any excess material in corners, along doorframes or at the floor can be cut off cleanly with the mounting angle and scalpel. To do so, align the mounting angle under the WALLSTOXX and cut along the angle with the scalpel.

8

Peel off your WALLSTOXX:

If you'd like to remove your motif at some point, simply loosen one of the corners and peel the complete WALLSTOXX off like a sticker. Ingeniously simple and simply ingenious, don't you think?

9

Washing your WALLSTOXX:

If your WALLSTOXX gets dirty or you'd like to shelve it until the next decorating season comes around, you can wash it without detergent in the washing machine at "cold" (20° C) and spin-dry it at 400 rpm max. After washing it, you can mount your WALLSTOXX again immediately. You can also air-dry and store it until the next time you want to put it up. Please note that WALLSTOXX must not be ironed or put in the tumble dryer.
